**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

***Written Description***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

1. Claims 1-19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Because there is no clear description and/or envision in specifications to fluorous polymer. The generic terminology fluorous polymer is not limited to fluorous silica. The state of art recognizes the fluorous polymer as very broad, generally refers to various types of polymers containing fluorinated hydrocarbons or fluorinated polymers that selectively dissolves in fluorocarbon solvents as fluorous support.

Since applicant fails to provide any guidance as to how effect the processes claimed. A general recitation in the specification that the fluorous polymer can be used as fluorous support for purification of radiolabelled compounds comprising radioimaging and therapy agents etc., is insufficient.

Especially, the lack of evidentiary support, it is beyond the skill of skilled artisan to use an fluorous polymer to be effective against the claimed conditions in the subject. The specification fails to include any specific advantages of using fluorous polymer compared to standard methods of purifying radiolabelled compounds or any working examples showing fluorous silica effectiveness of the said polymer against all the claimed conditions.

The specifications provides lack of evidential support substantially where any skilled artisan can not clearly understand how the claimed invention( f.e. a method of purifying radiolabelled compounds employing fluorous polymer as claimed) is made and used at the time of the invention with the information provided and thus, that the inventor(s), at the time the application was filed, had possession of the claimed invention.

### ***Claim Objections***

2. Claim 13 is objected to because of the following informalities: Claim 13 is dependent on itself. Appropriate correction is required.

### ***Conclusion***

No claims are allowed at this time.
